

MD AKHLAKUR RAHMAN

Backend Engineer | Java • Spring Boot • Kafka • Redis
Bengaluru, India | +91 8271111811 | md.akhlakur.rahman.dev@gmail.com | LinkedIn | GitHub

SUMMARY

Backend Engineer with 2 years of production experience building scalable Java and Spring Boot microservices in the financial services domain. Designed and built a distributed **rate-limiting, metering, and authorization** service (Redis Lua, atomic request accounting, per-user/per-endpoint policies) and an event-driven order processing pipeline using Kafka **pub/sub**, idempotent consumers, and dead-letter queues. Improved API response time by 40% and batch throughput by 3× through database optimization and concurrent programming. Strong CS fundamentals in data structures, algorithms, and OOD; experienced with AI-assisted development using **Claude/Anthropic**.

TECHNICAL SKILLS

Languages	Java 17, SQL, Python
Backend	Spring Boot, Spring MVC, Spring Data JPA, Hibernate, Spring Security, REST APIs, Microservices
Messaging	Apache Kafka (Pub/Sub, Consumer Groups, DLQ, Partitioning), Redis (Lua, Caching), PostgreSQL, MySQL
Cloud	AWS (EC2,RDS,S3), Docker, Docker Compose, Jenkins, Git, Maven, Linux
Testing	JUnit, Mockito, Postman, Swagger/OpenAPI
Core	Data Structures, Algorithms, OOP, Design Patterns, Distributed Systems, Concurrency, System Design
AI Tools	Claude/Anthropic (Claude Code), GitHub Copilot, Cursor

EXPERIENCE

Associate Software Engineer <i>Accenture Solutions Pvt. Ltd.</i>	Feb 2022 – Oct 2023 <i>Pune</i>
--	---

- Improved API response time by **40%** by optimizing Hibernate fetch strategies, eliminating N+1 queries and introducing composite indexes.
- Increased financial batch throughput by **3×** using Java multithreading and concurrent programming.
- Modernized **50+** Oracle Service Bus integrations into Spring Boot microservices and delivered **10+** production REST APIs.
- Resolved production incidents through root-cause analysis and hotfixes, contributing to **99%+** application availability.

Independent Backend Engineering <i>Self-directed Projects</i>	Nov 2023 – Present <i>Remote</i>
---	--

- Designed and implemented distributed backend systems to deepen expertise in Kafka, Redis, concurrency, distributed systems, and system design.
- Leveraged Claude Code, GitHub Copilot, and Cursor to accelerate implementation, documentation, and iterative development while maintaining code quality.

PROJECTS

Distributed API Metering, Rate Limiting & Authorization Service	Java Spring Boot Redis Lua
- Built a distributed metering and rate-limiting service using Redis Lua scripts for atomic request accounting and configurable per-user, per-IP, and per-endpoint authorization policies. - Validated under 10k+ requests/sec using JMeter load testing.	

Order Processing Event Pipeline	Java Spring Boot Kafka
- Built an event-driven order processing pipeline using Kafka pub/sub, idempotent consumers, retries, dead-letter queues, and consumer groups. - Demonstrated partitioning, replication and consumer-group rebalancing using a multi-broker Kafka cluster.	

LinkForge – URL Shortener	Java Spring Boot PostgreSQL Redis
Built a scalable URL shortener with REST APIs, Redis caching, and asynchronous click-analytics processing to keep redirect latency unaffected.	

Education

Bachelor of Technology (Computer Science & Engineering) RCC Institute of Information Technology	2016–2020
---	-----------

CERTIFICATION

Claude Code in Action – Anthropic Academy
